

## DataTrace Repair of Unsalvageable Loggers

The cost of our DataTrace calibration service includes battery replacement and all necessary repairs, except when the logger is determined to be unsalvageable. The logger may be deemed unsalvageable if (i) the damage is determined to have been caused in the field; and (ii) the cost of repairing the damage is more than 50% the cost of building a new logger.

If your logger is deemed unsalvageable during evaluation, you can either purchase a new replacement logger or have the original logger returned to you unrepaired. Customer service will contact you as soon as our service technicians evaluate the logger and determine it to be unsalvageable to provide you with these options.
